

TVMosaic Setup

Installation

[Download](#) the TVMosaic server.

It is freeware and can be configured by web browser. Because it is not bonded to windows it may run on many platforms. Please be aware, that the TVMosaic server is not developed by us, is not part of the MP2 installer and we do not provide any support accordingly. If you have trouble, please visit the [TVMosaic forum](#).

Make sure you installed the TVMosaic plugin of the MP2-Client (It can be select in the installer).

Configuration in TV settings of MP2-Client

- Server address: <name> or IP for the device on which TVMosaic-service runs (default: "localhost", so nothing to enter, if on same device as MP2-Client). By default the port is already set to "9270"
- UserName: Can be set, if required
- Password: Can be set, if required
- You need to add a new media source with the category "TVMosaic" so recordings made with TVMosaic are shown and imported automatically
