

# Views

Some windows support multiple [views](#), as in Pictures, Music and Video windows. There are three main types of views:

- [Shares View](#) - for browsing your folders/files like in Windows Explorer
- [Database Views](#) - for viewing data you have scanned into a database. This allows you to display views like Titles, Actors, Years or Genres in Videos
- [Playlists](#) - for managing playlists and playing media via a playlist

Press the Playlist button to view Playlists.

Press the **Switch View** button on the menu to choose between Shares or Database views as in Videos:
