Introduction

“Music was my first love and it will be my last ...”

- “Music” by John Miles

If you love music the same way I do, you may have encountered situations where you've got frustrated.

- Songs are not displayed correctly in MediaPortal or other media players
- Artists are named differently
- Album Cover Art is missing
- Like to see Lyrics

MPTagThat is the solution to your problems!

MPTagThat not only gives you the option of fixing missing Tag entries in your music files, it also allows you grabbing Covers and Lyrics, identifying unknown songs, automatic tagging from the internet and many other functions.

After MPTagThat has done its job, you are able to run e.g. a database scan from within MediaPortal and your songs will appear correctly in the various Database Views.
