 - [2.1 Language](#)
 - [2.2 Online sources, content and filters](#)

Overview

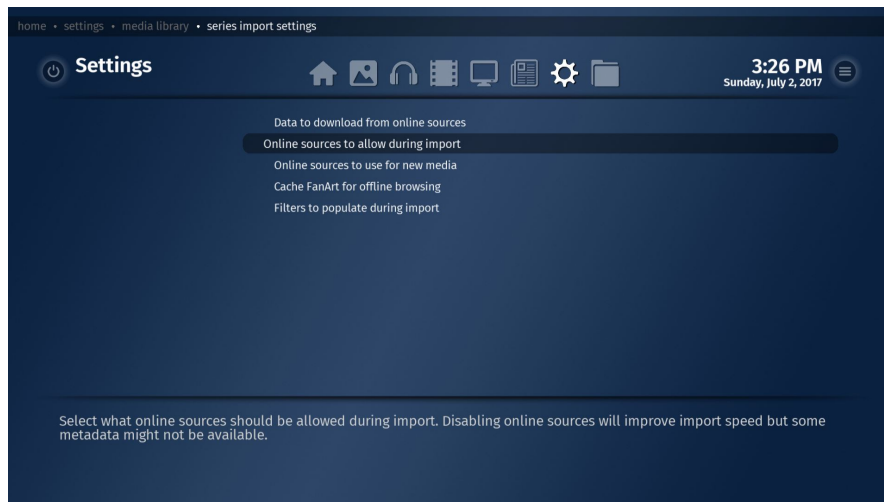

The series importer parses the series episode file name to recognize the respective series and episode, adds it to the database and then downloads associated information (summary, Fanart, actors and characters, director and more). Each import consists of two passes.

Importer settings

Language

All series information will be downloaded in the language as per the definitions made for the Media library under [Language settings](#)

Online sources, content and filters

The setup of online sources, content to be downloaded and filters to populate is described in the general [Import settings](#) section.

For preparation of movie files and their name convention please refer to chapter [setting up media items](#).
