

# 1.15.x - Ability to choose between different settings for DVD and Blu-ray regarding Discs and Images playback

## Overview

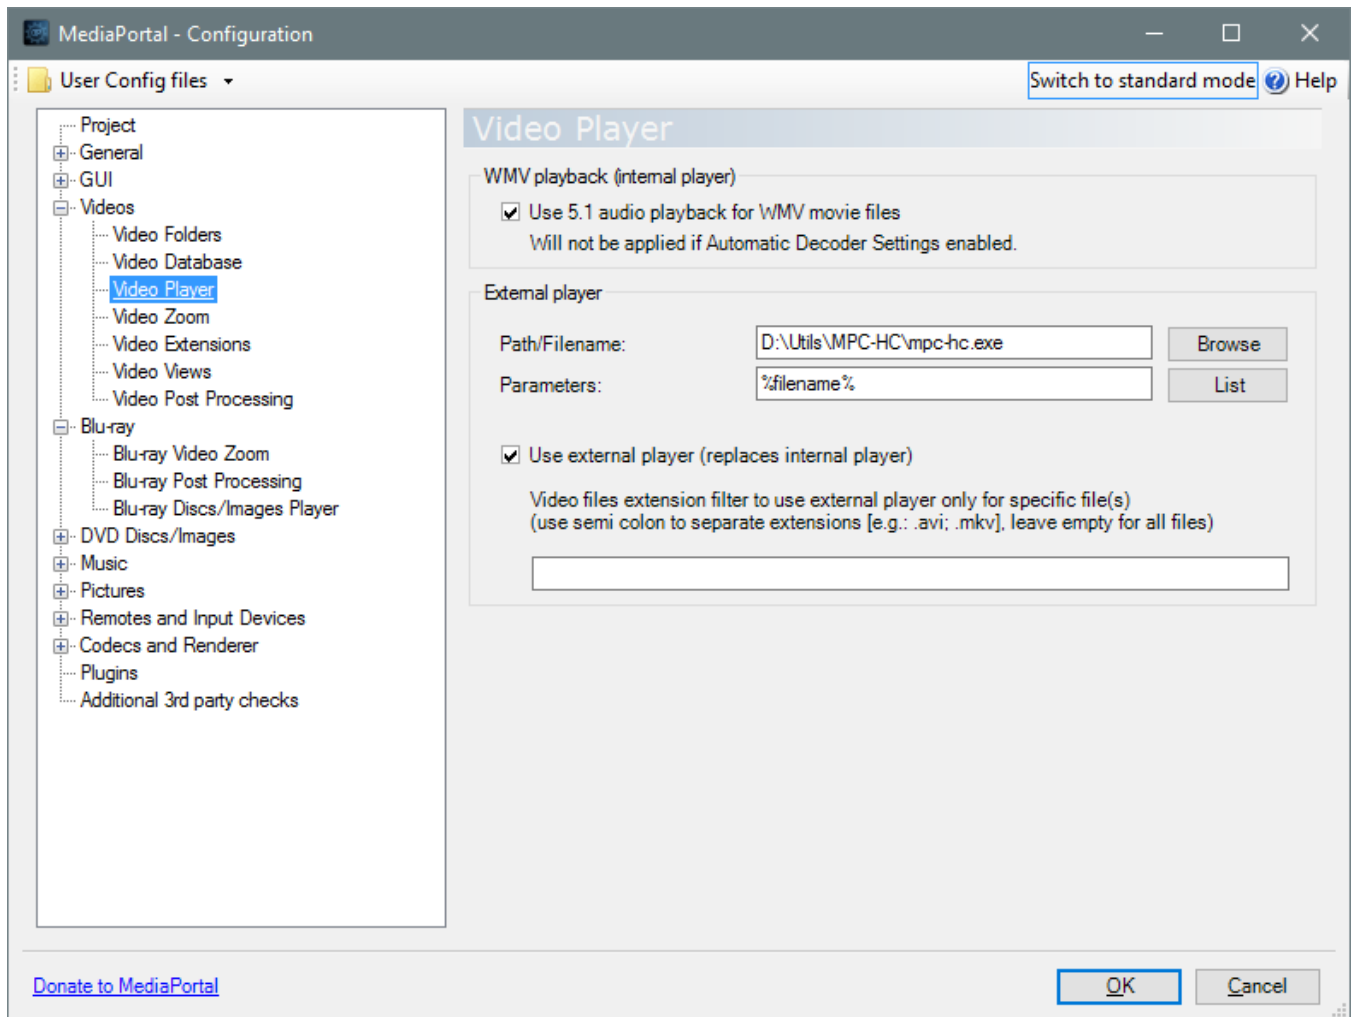

With this rework you now have the ability to use different external players for either Blu-ray Discs/Images, DVD Discs/Images or other video files.

## Description of Change

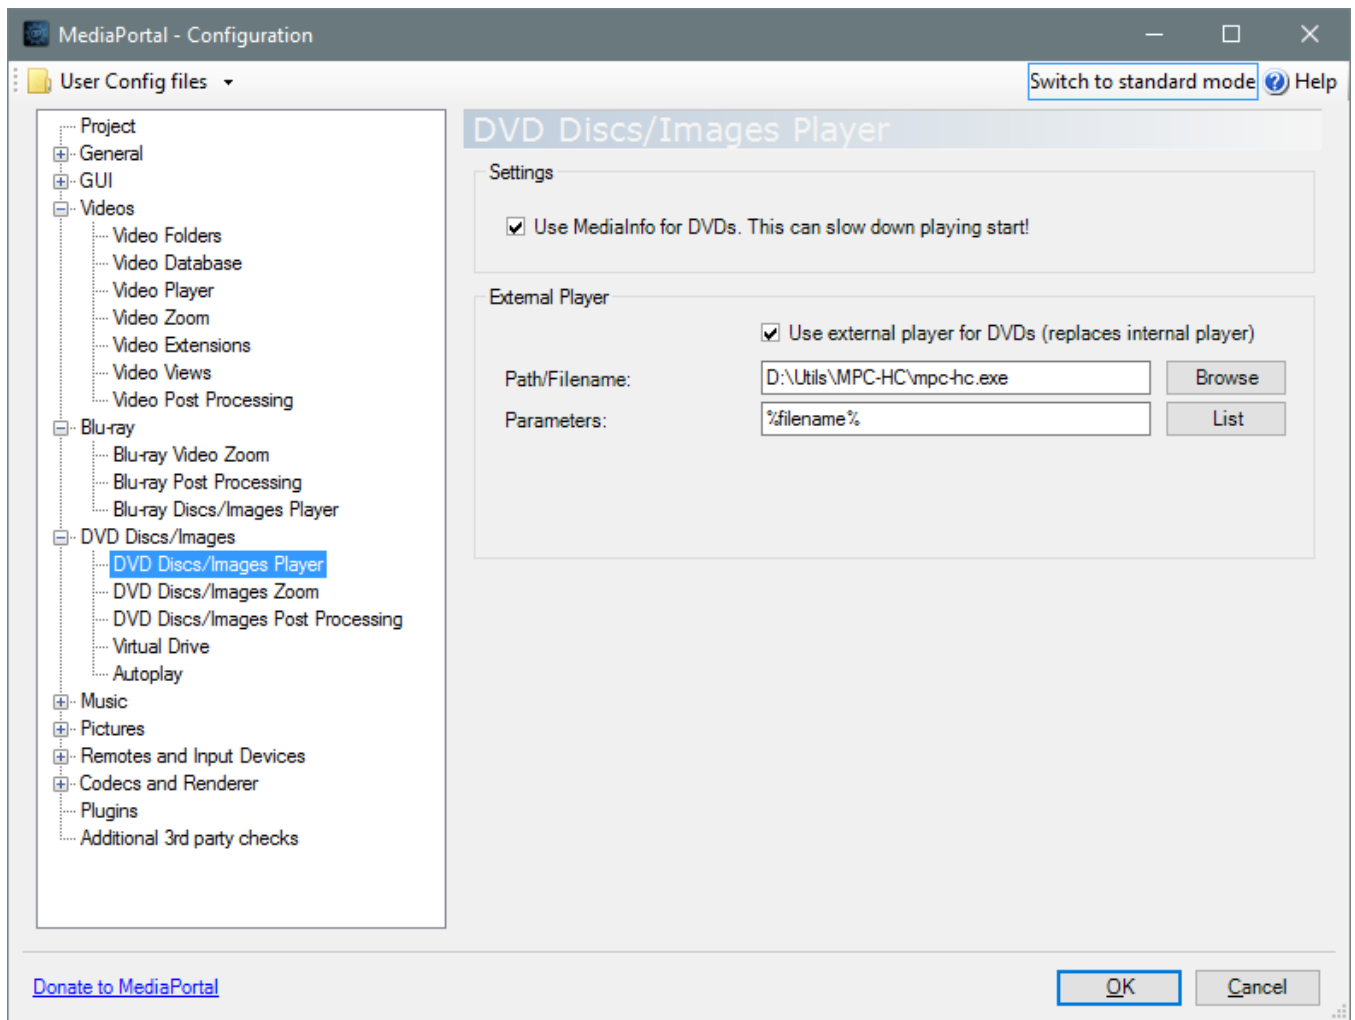

Before this rework you only had the option to choose one external player for all Discs or Images. Now you have the opportunity to select different external players for Blu-ray Discs/Images and DVD Discs/Images. For example you also can choose if you want to use the internal player for DVD Discs/Images but an external player for Blu-ray Discs/Images.

Below you can see where to find those new options in the Mediaportal Configuration.

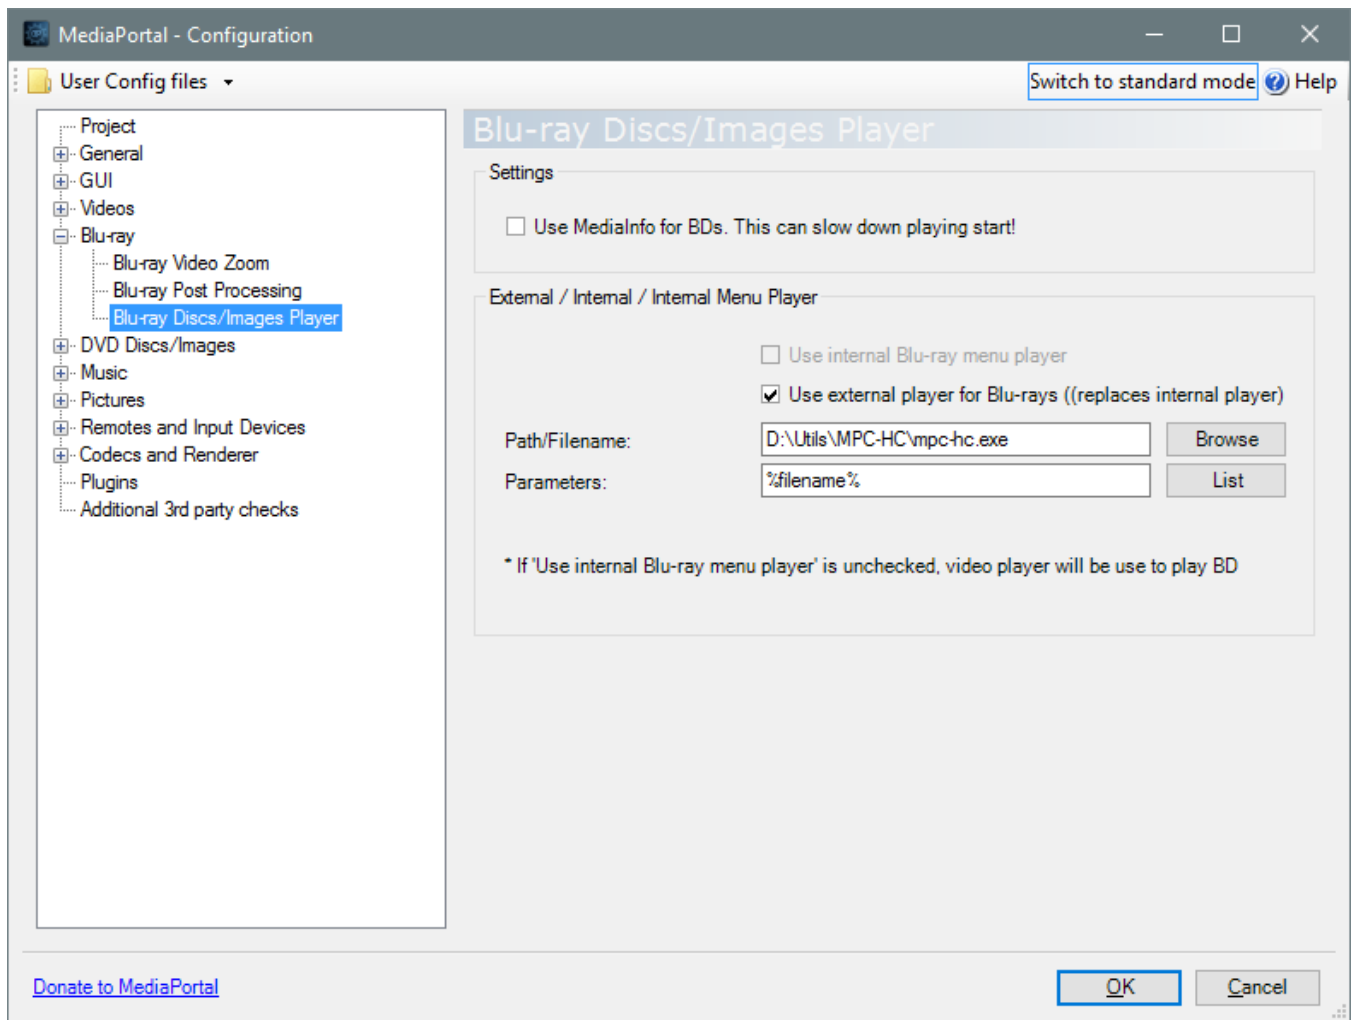

External Player configuration for video files:

External player configuration for DVD Discs/Images:

External player configuration for Blu-ray Discs/Images:
