

Localization

You can customize MediaPortal for your region or country. We call this localization.

MediaPortal supports many languages, both for the [Installer \(Deploy Tool\)](#) as well as the MediaPortal user interface and most major plugins.

If your language is not supported, you can contribute it easily. See [Contribute > Localization](#).

Customize content for your local region

- [Localization](#)
 - [Language Files](#)
 - [EPG Grabbers](#)
 - [Movie Info Grabbers](#)
 - [By Country](#)
 - [How to get CC in ATSC or QAM streams](#)

You may contribute EPG and Movie Info grabbers for your region. See [Contribute > Localization](#).

Many plugins also provide local content for you.

The pages by Country list many sources of local data such as [Weather images](#) you can add to your Weather configuration in MediaPortal.

Channel Logos

In addition, there are sources for local radio and TV [Channel logos](#) which can display whenever radio or TV channels display.
