

1.14.x - Adding ignore fullscreen resolution changes option

Overview

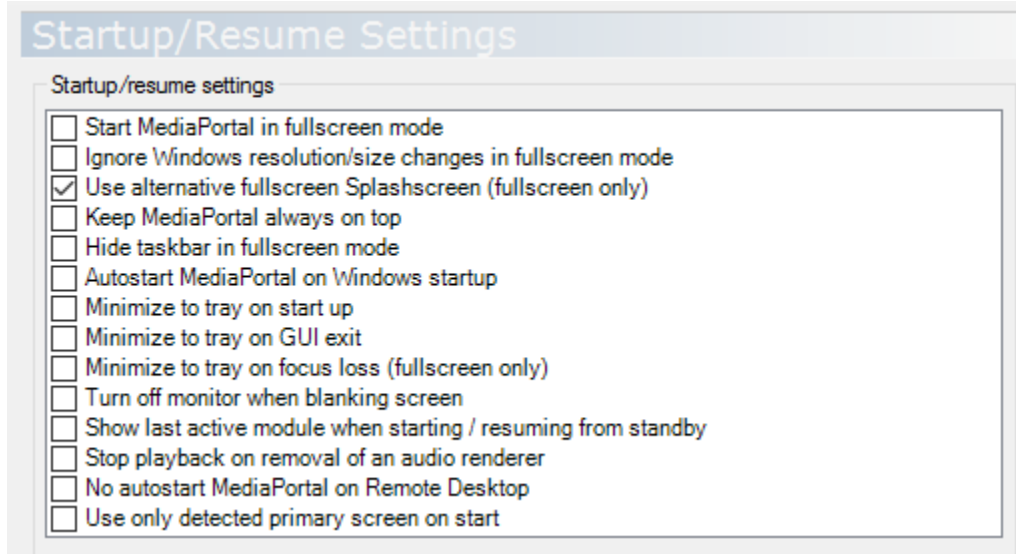

MediaPortal get a new option to ignore resolution/size changes when MP is in fullscreen mode. User can always switched to windowed mode if they want.

Description of Change

This option can be set from MediaPortal config tool.

When this option is checked and MP is in fullscreen mode, MP will not handle resolution change from windows message, this option is most needed when user use HDMI connection, so when PC goes to standby, most of the time the resolution change (hidden) and MP react to it and can cause issue on resume, with this option, MP will stay at the fullscreen resolution.

From the screenshot below, the new option is the second one.
