

Enhance textXOff in Buttons

Purpose

- **Required:** No
- **Type of Change:** Feature

Enhance buttons to ignore textXOff "margins".

Description of Change

Positioning text to a desired location using textXOff on several buttons may not be possible given a specific button width and text label width. Using the textXOff shrinks the width of the label and may clip (fade out) the label based on the textXOff value. This feature allows for the positioning of the text using textXOff while preserving the width of the label text. To use simply set the textXOff property hasMargin to "no"; e.g. `<textXOff hasMargin="no">20</textXOff>`. This implementation is backward compatible. The following controls support this implementation: `button`, `togglebutton`, `menubutton`, `spinbutton`. See also: [Button](#), [ToggleButton](#), [MenuButton](#), [SpinButton](#)
