

1.3.x - Installer

Purpose

- **Category:** Deploy Tool
- **Type of Change:** Feature

Description of Changes

Default Option

The default option in Installer has changed from 'Fresh' (clean) install to 'Update', since in most cases you may now update between releases.

Choose a Skin

The Installer now installs the new Titan HD skin and offers you a choice of which skin you wish to use when you first start MediaPortal:

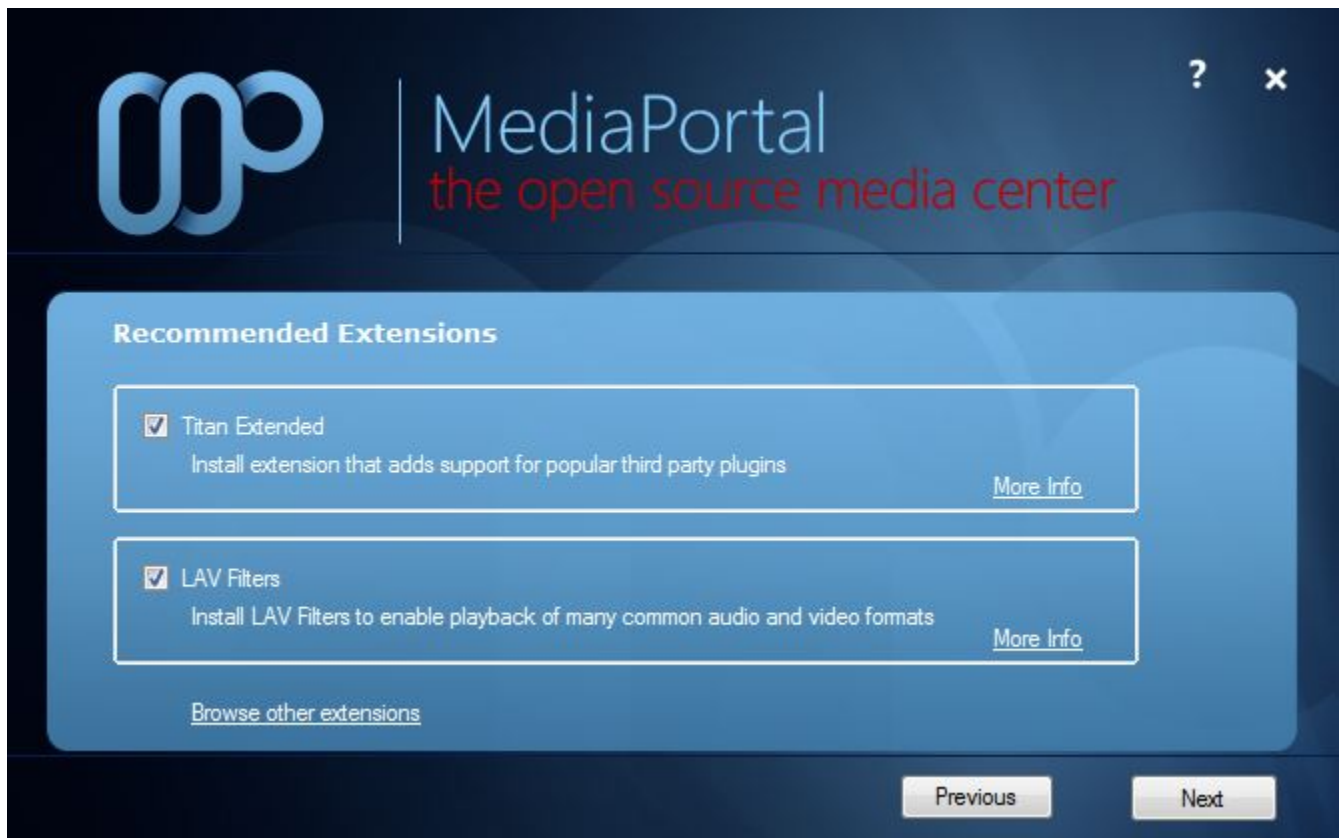

Note: Existing skin only displays when upgrading a current installation of MediaPortal.

Recommended Extensions

Regardless of which installation method you choose, the installer will offer you the choice to install the recommended extensions:

- [Titan Extended](#) - for support for popular plugins as well as the Titan Skin Updater.
- [LAV filters](#) - for out of the box playback or most audio and video formats. LAV Filters can now be selected even on upgrade.

Recommended extensions are available via our MediaPortal [Extension Installer](#) and can be updated when new versions become available. **You do not need to re-install MediaPortal.**
