

# Index Item Number Display

## Purpose

Returns the index (i.e. number of item in a list) of the currently selected item for skin creators to use if they wish. Note that if the selected item is "..", then an empty string is returned.

## Description of change

For example you can add `#selectedindex` to `#itemcount`:

```
<label>#selectedindex of #itemcount</label>
```

Which results in: **5 of 525 objects** when you are viewing the 5th item in a list of 525 items.

This patch is intended to be used with the `textcontent3` patch (*approved for 1.2.0*) to generate numbered lists.

See Forum Thread [Add GUI Property #selectedindex](#) for further info and examples
