## Overview

The Topbar plugin enables the display of the Topbar, for navigation and playback controls

## Setup

See [Configuraiton > Plugins > Top Bar](#) for autohide and timeout settings

## Usage

The Topbar displays navigation and playback controls when you hover your mouse (or finger on touch screens) at the top of most windows, unless the topbar has been disabled for that window. It is used primarily by mouse and touch screen users.

In many skins, like Default/wide, when you press the up arrow from a Menu option, it will display the topbar

- See [Navigation > Top Bar](#) for more details on using the Top Bar
